## Library Book Issue Reports Suite - Report Types

| Detail | |
|---|---|
| Name | THEJASWINI K J K |
| Register Number | 240701566 |
| Course / Section | B E CSE |
| Platform | Zoho Creator |
| Application | Library Book Issue Management |
| Assignment | Assignment 06 - Report Types |

## 1. Aim

To design and build a suite of nine Reports on the Book_Issue_Request_Form in Zoho Creator, one for each Report Type (List, Spreadsheet, Kanban, Calendar, Map, Timeline, Pivot Table, Chart and Summary), so that the librarian, counter staff, delivery assistant and college management each get a view suited to their needs.

## 2. Procedure

### 2.1 Opening the Report Builder

1. Opened the application Library Book Issue Management in Zoho Creator and used the existing Book_Issue_Request_Form as the base form.
2. Added a few sample records to the form, covering different book categories, member types, issue statuses, due dates and hostel addresses.
3. Used the Create New > Report option and selected a report type for each of the nine reports.

### 2.2 Reports created

| Report type | Report name | Key configuration |
|---|---|---|
| List View | All_Issue_Requests_List | Columns: Member Name, Book Category, Member Type, Number of Copies, Issue Status; sorted by Request Submitted On (descending) |
| Spreadsheet View | Issue_Requests_Spreadsheet | Inline-editable columns: Issue Status, Due Date, Books Returned; grouped by Book Category |
| Kanban View | Issue_Status_Kanban | Grouped by Status: Requested / Approved / Issued / Returned / Overdue; card shows Member Name and Book Category |
| Calendar View | Due_Date_Calendar | Based on Due_Date; each day cell shows the count of books due for return |
| Map View | Member_Hostel_Map | Based on Hostel_Residential_Address (geocoded); pins colored by Member Type |

| Report type | Report name | Key configuration |
|---|---|---|
| Timeline View | Issue_Activity_Timeline | Based on Request_Submitted_On; grouped by week, showing cumulative issue requests |
| Pivot Table | Category_By_MemberType_Pivot | Rows: Book_Category; Columns: Member_Type; Values: Count of Issue Requests |
| Chart View | Category_Popularity_Chart | Bar chart; X-axis: Book_Category; Y-axis: Count of Issue Requests |
| Summary View | Member_Wise_Summary | Grouped by Member_Name; Summary columns: Count of Books Borrowed, Sum of Fine Amount |

## 2.3 Purpose of each report

| Used by | Report name | Purpose |
|---|---|---|
| Librarian | All_Issue_Requests_List | Flat, searchable list of every request |
| Counter staff | Issue_Requests_Spreadsheet | Bulk update of status and due dates |
| Librarian / counter staff | Issue_Status_Kanban | Visual tracking from Requested to Returned |
| Librarian | Due_Date_Calendar | Books due per day; overdue follow-up |
| Delivery assistant | Member_Hostel_Map | Home-delivery route planning |
| Librarian | Issue_Activity_Timeline | Borrowing trends across the semester |
| Librarian / committee | Category_By_MemberType_Pivot | Categories popular with students vs faculty |
| Library committee | Category_Popularity_Chart | Category-wise demand for procurement |
| Librarian | Member_Wise_Summary | High borrowers and outstanding fines |

## 2.4 Configuring the report rules

1. All_Issue_Requests_List: set the default sort to Request Submitted On, descending, so the most recent requests appear first; added a search bar and filters for Book Category, Member Type and Issue Status.
2. Issue_Requests_Spreadsheet: made only Issue Status, Due Date and Books Returned editable, locked all other fields, and restricted edit permission to the Library Counter Staff role.
3. Issue_Status_Kanban: grouped cards by the Status field so that moving a card between columns updates Status automatically with a timestamp.
4. Due_Date_Calendar: based the calendar on Due_Date and highlighted past dates in a different color to flag overdue books.
5. Member_Hostel_Map: enabled geocoding on the Hostel_Residential_Address field for accurate pin placement and colored the pins by Member Type.
6. Issue_Activity_Timeline: based the timeline on Request_Submitted_On, grouped by week, with daily data refresh.
7. Category_By_MemberType_Pivot: set blank cells to display as zero instead of being left empty.
8. Category_Popularity_Chart: set the chart to auto-refresh whenever a new issue request is submitted.
9. Member_Wise_Summary: grouped by Member_Name and kept members with zero pending fines listed with a fine amount of zero.

# 3. Output

## (a) All_Issue_Requests_List (List View)

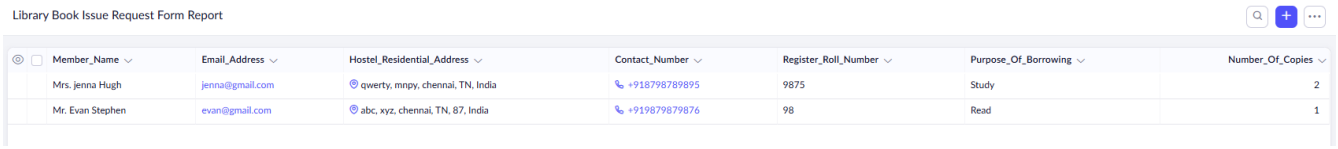

*Figure 1: All_Issue_Requests_List in its configured state with sample data*

## (b) Issue_Requests_Spreadsheet (Spreadsheet View)

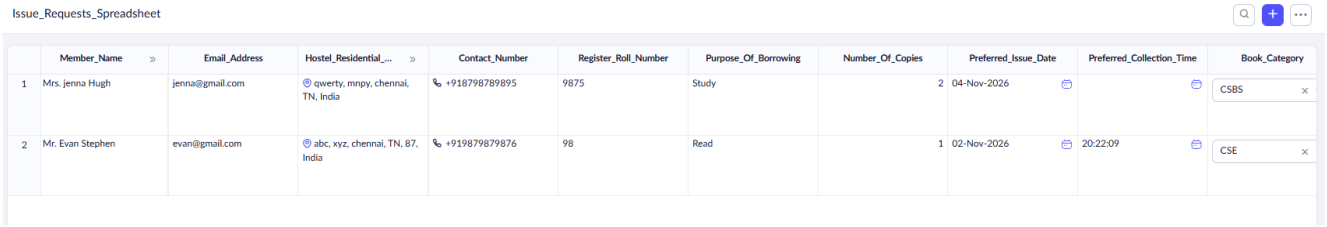

*Figure 3: Issue_Requests_Spreadsheet in its configured state with sample data*

## (c) Issue_Status_Kanban (Kanban View)

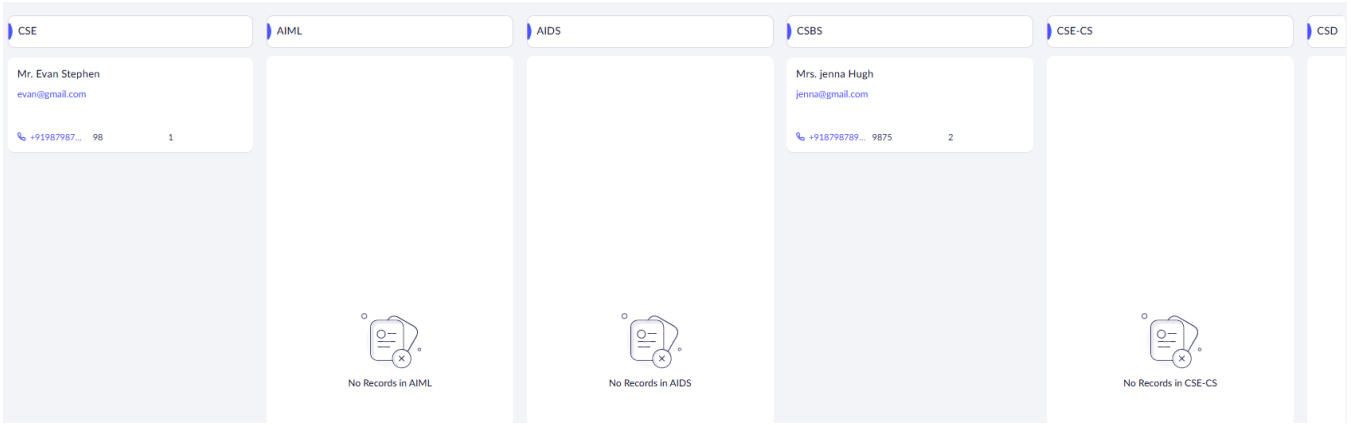

*Figure 5: Issue_Status_Kanban in its configured state with sample data*

## (d) Due_Date_Calendar (Calendar View)

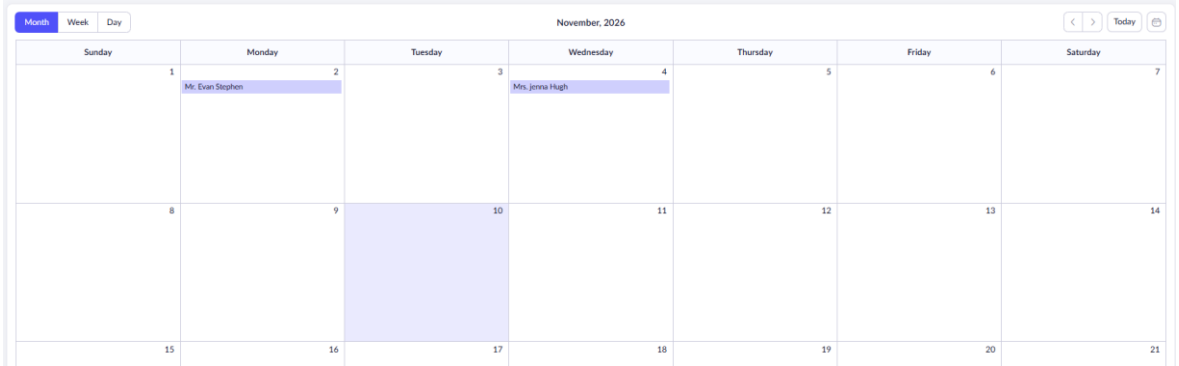

*Figure 7: Due_Date_Calendar in its configured state with sample data*

### (e) Member_Hostel_Map (Map View)

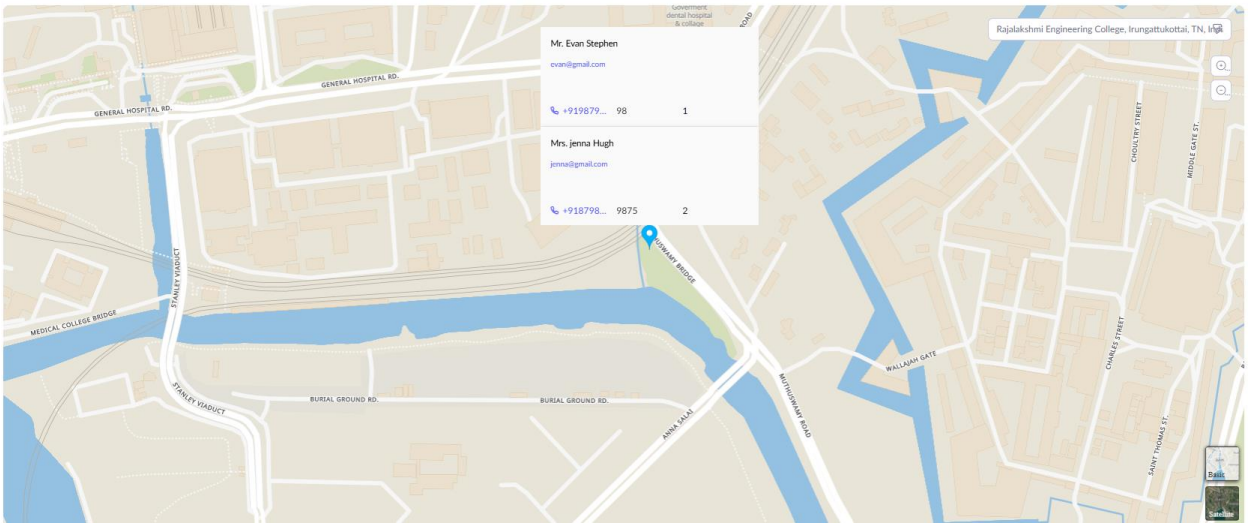

*Figure 9: Member_Hostel_Map in its configured state with sample data*

### (f) Issue_Activity_Timeline (Timeline View)

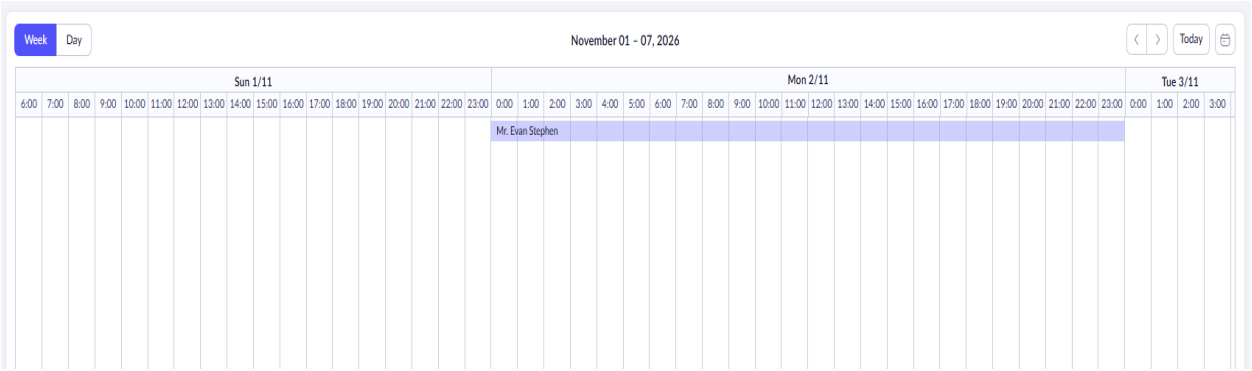

*Figure 11: Issue_Activity_Timeline in its configured state with sample data*

### (g) Drill-down and interaction

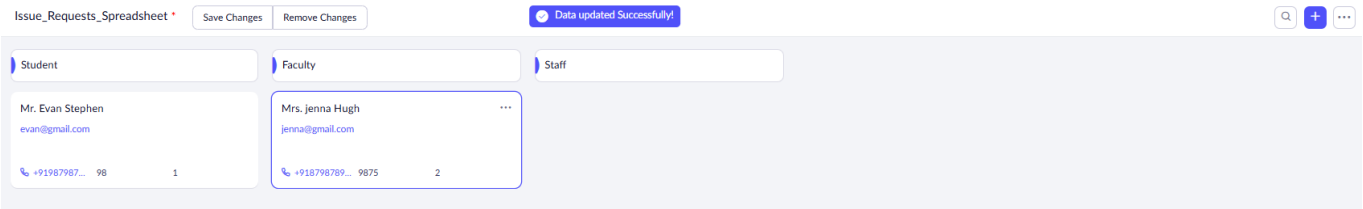

*Figure 20: Dragging a card across columns in Issue_Status_Kanban*

## Result:

All nine reports (List, Spreadsheet, Kanban, Calendar, Map, Timeline, Pivot Table, Chart and Summary) were built on the Book_Issue_Request_Form in Zoho Creator. The grouping, sorting and permission rules were applied, and each report shows the sample data in its configured state.
