LAB RECORD

Library Book Issue Command Center - Page Elements

Detail	
Name	THEJASWINI K J K
Register Number	240701566
Course / Section	B E CSE
Platform	Zoho Creator
Application	Library Book Issue Management
Assignment	Assignment 06 - Page Elements

1. Aim

To design and build the Library_Command_Center_Page in Zoho Creator's Page Builder using all eleven Page elements (Panel, Board, Chart, Gauge, Search, Form, Report, Snippets, Button, Widgets and Viewer), so that library staff can monitor, search, process and reference book-issue data from a single screen.

2. Procedure

2.1 Creating the page

1. Opened the application Library Book Issue Management in Zoho Creator and created a new Page named Library_Command_Center_Page.
2. Placed the Command_Center_Main_Panel as the outer container and arranged all other elements inside it.
3. Used the existing Book_Issue_Request_Form, Book_Issue_Request_Report and Category_Popularity_Chart as the underlying data sources.

2.2 Adding the eleven Page elements

Element	Element name	Purpose	Placement
Panel	Command_Center_Main_Panel	Outer layout container wrapping the entire page	Wraps the entire page
Board	Issue_Status_Board	Kanban-style board to drag requests between stages	Central column: Requested, Approved, Issued, Returned, Overdue
Chart	Category_Popularity_Chart_Widget	Live issue counts per book category as a bar chart	Top-right area, next to the Gauge

Element	Element name	Purpose	Placement
Gauge	Monthly_Circulation_Target_Gauge	Progress toward the monthly circulation target	Top-left area, first element seen
Search	Book_Member_Search_Bar	Look up a book or member by name, ISBN or register number	Fixed at the top, above the Board
Form	Quick_Counter_Issue_Form	Embeds Book_Issue_Request_Form for walk-in requests	Right-hand panel, expandable tab
Report	Full_Issue_Requests_Report	Embeds Book_Issue_Request_Report for row-level review and export	Lower section, below the Board
Snippets	Library_Rules_Return_Policy_Snippet	Shared snippet of library rules and return/fine policy	Sidebar, quick-reference text
Button	Send_Overdue_Reminder_Button	One-click reminder emails to members with overdue books	Directly above the Board, near the Overdue column
Widgets	NewArrivals_And_ReadingRoom_Widgets	New arrivals and reading-room seat occupancy	Bottom strip, below the report
Viewer	Recommendation_Letter_Viewer	Inline viewer for the faculty recommendation letter	Sidebar, below the Snippet

2.3 Page layout

Section	Elements
1 - Overview Strip	Gauge, Chart, Search
2 - Processing Workspace	Button, Board
3 - Detailed Data	Report
4 - Reference & Quick Actions (Sidebar)	Snippets, Viewer, Form (expandable tab)
5 - Operations Strip	Widgets

2.4 Configuration and access rules

1. Panel: set role-based visibility on Command_Center_Main_Panel so that only library staff accounts can access the page.
2. Board: mapped each column of Issue_Status_Board to a value of the Status field so that dragging a card updates the record instantly.
3. Chart: set Category_Popularity_Chart_Widget to auto-refresh at a fixed interval.
4. Gauge: made the target value configurable per month and set the gauge color to change from red to green as issued books approach the target.

5. Search: configured Book_Member_Search_Bar to search Book Title, Member Name and Register/Roll Number together.
6. Form: applied the same validation rules as the standard Book_Issue_Request_Form to Quick_Counter_Issue_Form.
7. Report: enabled export to Excel on Full_Issue_Requests_Report for librarian-level accounts only.
8. Snippets: kept Library_Rules_Return_Policy_Snippet centrally managed so that any edit reflects wherever it is reused.
9. Button: linked Send_Overdue_Reminder_Button to a workflow that emails only members whose Due Date has passed.
10. Widgets: set the new arrivals widget to pull recently catalogued titles and the reading-room widget to refresh from seat occupancy.
11. Viewer: configured Recommendation_Letter_Viewer to show the latest uploaded faculty recommendation letter without a manual link update.

3. Output

(a) Full page in the Page Builder editor

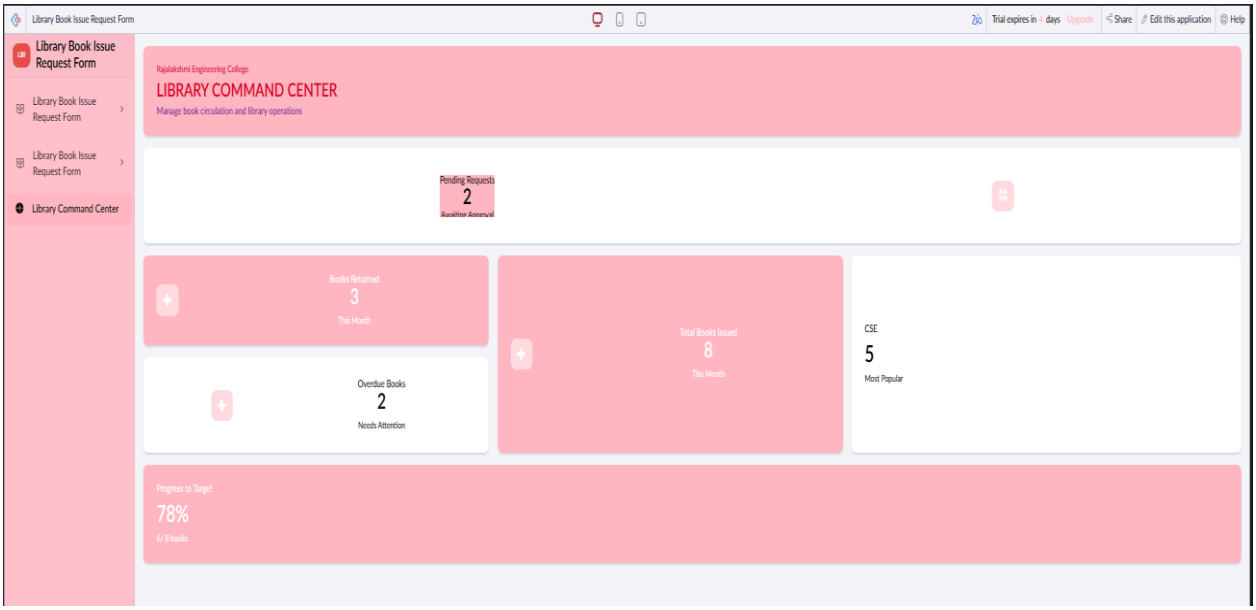

Figure 1: Library_Command_Center_Page in the Page Builder with all elements labeled

Result:

The Library_Command_Center_Page was built in Zoho Creator's Page Builder with all eleven Page elements arranged inside the Command_Center_Main_Panel. The configuration and access rules were applied, and the page gives library staff one workspace for monitoring, searching, processing and referencing book-issue data.
